

Policy

Environment

This environmental policy statement applies to the EPZ company. The following principles are applied:

- EPZ produces electricity using nuclear power with a competitive cost price level and acts in a corporate socially responsible manner;
- EPZ works continuously on improving safety, availability and reliability of the nuclear power plant. The protection of the environment, preventing environmental risks and contamination as much as possible and meeting legislation and regulations are important principles within this context;
- This environmental policy has a high priority and is aimed at with the same efforts as other business objectives;
- In order to carefully manage the world's raw material resources, we are working with a differentiated package of nuclear fuels;

- Based on its corporate social responsibility, EPZ will produce electricity in the most environmentally friendly manner possible by:
 - Keeping the emissions of chemicals, radioactive substances and radiation levels as low as possible and well below the permit requirements by applying the best available technologies, on condition that these further optimisations are cost effective.
 - Reducing the environmental load by producing as little waste as possible.
 - Aiming at a conversion performance that is the highest possible with regard to the nuclear power plant and the lowest possible energy and water consumption.
 - Provide open and transparent accountability to customers, employees and the surrounding area.

To implement this environmental policy effectively, work is performed in accordance with an integral management system that complies with international standards and focuses on the continuous improvement of environmental performance.

- EPZ communicates about the environmental performance with external stakeholders through the environmental annual report, the EPZ Annual Report and the website;
- EPZ is fully aware that specific goals must be achieved in cooperation with other parties and is convinced that improvements are possible when acting in agreement.

Management, EPZ employees and those working for (sub)contractors are responsible for the implementation of this environmental policy. They make their contribution, help each other in this, hold each other accountable and prevent or resolve circumstances that hinder or disrupt the implementation of this policy.

Carlo Wolters, Director
